Mohamed H. Essa

Flutter Developer — Enterprise Mobile Applications

Cairo, Egypt (open to relocation — Germany / EU-remote) · +20 102 153 7037 · mhosny67710@gmail.com · linkedin.com/in/mohamed-hosny-essa · github.com/Mohamed-H-Essa · mohamed-h-essa.github.io/portfolio

SUMMARY

Flutter developer with 3+ years of experience (2 years freelance, 2 years in-house) building enterprise mobile applications, including systems for Egypt's Ministry of Health (600+ healthcare facilities) and UNICEF, and e-commerce platforms for clients in the UAE and Oman. Strong in Clean Architecture, BLoC/Cubit and Riverpod state management, offline-first data sync, and dynamic form workflows. Backend-capable (NestJS/TypeScript, Laravel and Python maintenance) with verified open-source contributions to the Nilefy low-code platform. AWS Certified Solutions Architect – Associate.

SKILLS

Mobile: Flutter, Dart, BLoC/Cubit, Riverpod, Clean Architecture, offline-first sync, dynamic forms & validation, Dio/Retrofit, Hive & secure storage, Firebase (Auth, FCM, Firestore), push notifications, geolocation, biometrics, widget & unit testing

Backend: NestJS, TypeScript, Node.js, Laravel (maintenance), Python, PostgreSQL, REST API design, Drizzle ORM

Cloud & delivery (supporting): AWS (certified SAA-C03), Docker, CI/CD with GitHub Actions & Codemagic, Git; home lab running Kubernetes, PostgreSQL and Grafana/Prometheus

Languages: Arabic (native), English (fluent), German (learning)

EXPERIENCE

Flutter Developer — Intrazero, Cairo, Egypt

Aug 2024 – Present

- Built Egypt's National Medical Waste Management System for the Ministry of Health as a Flutter application digitizing waste tracking across **600+ healthcare facilities**, with multi-level approval workflows.
- Designed a reusable form-orchestration engine (typed generic inputs, cross-field validation, map-driven rendering) powering form-heavy government workflows; a public counterpart of the pattern is open-sourced on my GitHub.
- Developed core features for a UNICEF child-protection case-management platform, including offline-first delayed sync and dynamic forms for field workers.
- Delivered and maintained e-commerce applications for clients in the UAE and Oman (Motary, Al-Diplomacy), covering multi-language support, product search, and regional payment integrations.
- Maintained and fixed backend services in Laravel and Python supporting the mobile products.

Open-Source Contributor — Nilefy (low-code platform, NestJS/React)

Oct 2023 – Jun 2024 · github.com/nilefy/nilefy

- Contributed 118 commits (~12,700 lines) to the platform's TypeScript/NestJS backend.
- Implemented the encryption/decryption module securing data-source credentials, including nested-configuration handling.
- Built the application export/import pipeline, including component-tree serialization and DTO validation.
- Developed the REST API data-source connector with custom-header support, and table CRUD operations with transactional Drizzle ORM logic.
- Extended authentication with forgot-password and email-confirmation flows across backend and React frontend.

Freelance Mobile & Backend Developer — Remote

Jun 2022 – Jul 2024

- Delivered cross-platform client solutions using Flutter for mobile and Node.js/NestJS with Firebase and PostgreSQL for backends.
- Owned projects end-to-end: requirements, architecture, implementation, release, and post-launch maintenance.

SELECTED PROJECTS (public code — github.com/Mohamed-H-Essa)

- **star_wars_land** — Clean Architecture reference app: BLoC, offline caching, 30 test files, CI via GitHub Actions.
- **flutter_form_engine** — reusable dynamic-form engine with typed generic inputs and sync/async validation (Formz + BLoC).
- **wfm** — production-scale workforce-management app: Riverpod 2, Dio/Retrofit, Hive + secure storage, biometric auth, FCM.

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate (SAA-C03)** — score 832/1000, issued Jun 2026 (Credly-verified)

EDUCATION & COMMUNITY

- **B.Sc. Computer Engineering, Benha University** — Cairo, Egypt, 2019 – 2024
- Flutter Instructor (volunteer), IEEE Student Branch, Benha University — designed and taught a Flutter curriculum for engineering students
